1.0 INTRODUCTION

1.1 Operational Information

Name of Transportation Facility: Stellar Logistics Limited
Name of Facility Owner: Not Applicable
Name of Facility Operator: Stellar Logistics Limited
Name of Responsible Manager: Clive Cox, General Manager
Address: Stellar Logistics Limited
    Stellar Group Head Office
    Millennium Heights Building
    Liberation Link
State/Province: Accra Airport
Country: Ghana
Telephone: +233 (0) 31 2025356
Fax: +233 (0) 31 2032294
Email: clive.cox@stellar-africa.com

1.2 Stellar Logistics Limited

Stellar Logistics Ltd (Stellar) is a division of the Stellar Group of Companies. Stellar is a wholly owned Ghanaian entity that was established in 2007 to provide freight forwarding and logistics services. The Company’s head office is located in Accra, with branches in Takoradi, Accra, Tema, Ougadougou, Burkina Faso and Lagos, Nigeria.

The Group of companies provides logistics, hospitality, travel, power, ship broking, property maintenance and retail services. The logistics arm currently transport ammonium nitrate for Orica.

Stellar operate in total compliance with Foreign Corrupt Practices Act guidelines and adhere to the UK Bribery act. In addition, Stellar is TRACE certified.

Stellar plans to transport cyanide that is imported to Ghana through the ports of Takoradi and Tema. Stellar currently transports Ammonium Nitrate within Ghana for Orica and is an agent for Goldfields Ghana Limited.

1.3 Trans-shipping Depots or Interim Storage Sites

Within the scope of this audit, there are no trans-shipping depots or interim storage sites, as defined in the audit protocol.

Storage in transit may occur at Stellar’s Takoradi Depot in the event that receipt at the port is delayed. In this event containers will not be removed from the trailers and the vehicles will only be parked for a maximum of 24 hours.
1.4 Auditors Findings and Attestation

☑ in full compliance with

Stellar is:
☐ in substantial compliance with Cyanide Management Code
☐ not in compliance with

Audit Company: Golder Associates Pty Ltd
Audit Team Leader: Edward Clerk, CEnvP (112), Exemplar Global (020778)
Email: eclerk@golder.com.au

1.6 Dates of Audit

The Certification Transport Audit of Stellar was undertaken over two days between 28 and 29 August 2013.

I attest that I meet the criteria for knowledge, experience and conflict of interest for Code Verification Audit Team Leader, established by the International Cyanide Management Institute and that all members of the audit team meet the applicable criteria established by the International Cyanide Management Institute for Code Verification Auditors.

I attest that this Summary Audit Report accurately describes the findings of the verification audit. I further attest that the verification audit was conducted in a professional manner in accordance with the International Cyanide Management Code Pre-Operational Verification Protocol for Cyanide Transportation Operations and using standard and accepted practices for health, safety and environmental audits.
2.0 CONSIGNOR SUMMARY

2.1 Principle 1 - Transport

Transport Cyanide in a manner that minimises the potential for accidents and releases.

2.1.1 Transport Practice 1.1

Select cyanide transport routes to minimise the potential for accidents and releases.

☑ in full compliance with

Stellar is ☐ in substantial compliance with ☐ not in compliance with

Transport Practice 1.1

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is in FULL COMPLIANCE with Transport Practice 1.1 requiring cyanide transport routes to be selected to minimise the potential for accidents and releases.

Stellar has implemented a route assessment procedure to guide the selection and review of transport routes to minimise the potential for accidents and releases or the potential impacts of accidents and releases. The Procedure for Route Assessment prompts the persons undertaking the route assessment to ensure it covers identified potential risks along the route. Hazards identified during the route assessment and selection process are risk assessed using the process detailed in the Procedure for Route Assessment and the Hazard Identification and Risk Management procedure. Following the conduct of any risk assessment, the procedure requires the Emergency Plan (EP) and Cyanide Transport Management Plan (CTMP) to be reviewed for applicability with respect to any new risks identified or the implementation of risk controls or mitigation measures during the risk assessment process.

Stellar has implemented processes and a procedure to periodically re-evaluate routes used for cyanide deliveries. The Procedure for Route Assessment details that route assessments will be reviewed when there is a change to the route; e.g. permanent road alteration, regulatory authority impost, an incident occurs, or at a minimum, annually.

Stellar has a process for providing feedback on route conditions during the journey and after each convoy. The driver journey plan details planning process during the delivery. Upon returning from the delivery, the plan is signed and given to the Operations Superintendent, any issues the driver had on the journey are detailed on this plan. Any issues identified are reviewed and they are detailed on the Convey Leaders Route Advice Adjustment Form and communicated during the toolbox meeting prior to the next departure.

Stellar has documented measures taken to address risks identified with the selected routes within the CTMP and route assessments.

Stellar seeks input from stakeholders and applicable governmental agencies as necessary in the selection of routes and development of risk management measures. Stellar has identified Suppliers, Government Ministries and Departments, Medical Providers, Mine site customers and Local communities as stakeholder.
Stellar utilise road convoys to address safety concerns during transport. Stellar has a Convoy Management Procedure that details the requirements of transport in convoys. It states that all deliveries of cyanide are to be transported in a convoy situation at all time. In addition to convoys, Stellar also utilise GPS tracking of their vehicles.

The EP identifies the Police, Fire Service and Medical Services as external responders and Stellar has advised these external responders and medical facilities of their roles during an emergency response.

Stellar does not subcontract any of its cyanide transport operations within the scope of this audit.

2.1.2 Transport Practice 1.2

Ensure that personnel operating cyanide handling and transport equipment can perform their jobs with minimum risk to communities and the environment.

☑ in full compliance with

Stellar is

☐ in substantial compliance with

☐ not in compliance with

Transport Practice 1.2

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is in FULL COMPLIANCE with Transport Practice 1.2 requiring personnel operating cyanide handling and transport equipment can perform their jobs with minimum risk to communities and the environment.

Stellar only uses trained and competent operators to drive its trucks. All drivers are checked to ensure they have the correct licence before being employed.

All drivers, as well as being licenced to drive, are required to be trained in the following, as specified in Minimum Training Requirements procedure:

- Specific Site Inductions
- Product Awareness
- Emergency Response Requirements
- First Aid
- Convoy Procedures.

A review of the training matrix and records indicated that the training was being conducted.

Stellar does not subcontract any of its cyanide transport operations within the scope of this audit.
2.1.3 Transport Practice 1.3

Ensure that transport equipment is suitable for the cyanide shipment.

☑ in full compliance with
☐ in substantial compliance with Transport Practice 1.3
☐ not in compliance with

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is in FULL COMPLIANCE with Transport Practice 1.3 requiring that transport equipment is suitable for the cyanide shipment.

Stellar only uses equipment designed and maintained to operate within the loads it will be handling when transporting cyanide. The CTMP details that prime movers and trailers utilised are rated for the load to be carried in accordance with current Ghanaian regulatory (Ghana National Road Transport Commission and ECOWAS protocols) requirements, subject to a preventative maintenance program and pre-utilisation inspection. Stellar has implemented a Fleet Maintenance Plan procedure. This procedure details that preventive maintenance (PM) inspection and services will follow the recommended intervals (within 500 km or 7 days) by the manufacture guidelines. The scheduled maintenance includes checks on the adequacy structural components.

Stellar also have implemented a vehicle defect system to manage repairs and defects that identified during the vehicle inspection procedures.

Stellar has procedures in place to prevent overloading of vehicles. The CTMP states that the convoy make up is planned to ensure that loads to be carried are within the allocated vehicle configuration rated capacity.

Stellar does not subcontract any of its cyanide transport operations within the scope of this audit.
2.1.4 Transport Practice 1.4

Develop and implement a safety program for transport of cyanide.

☑ in full compliance with

☐ in substantial compliance with

☐ not in compliance with

**Stellar is**

Transport Practice 1.4

**Summarise the basis for this Finding/Deficiencies Identified:**

Stellar is in FULL COMPLIANCE with Transport Practice 1.4 requiring the operation develop and implement a safety programme for transport of cyanide.

Stellar has a *Container Collection Procedure* to ensure that the cyanide is transported in a manner that maintains the integrity of the producer’s packaging. This procedure requires Stellar to check container seal integrity.

Placards are used to identify the shipment as cyanide, as required by international standards. Stellar’s management plan details that vehicles transporting sodium cyanide will be placarded in accordance with the Australian Dangerous Goods (ADG) Code. The plan also includes an example of an Emergency Information panel (EIP) that goes on the containers. It was confirmed that all containers are labelled and trucks will be placarded on front and sides. The Pre-departure checklist includes the requirement to check that EIP on container are in place.

Stellar has implemented a safety programme for cyanide transport that includes the following:

- Vehicle inspections by the driver and Convoy Supervisor prior to departure. Any defects are noted and rectified appropriately.
- Stellar has implemented a Fleet Maintenance Plan. This procedure details that preventive maintenance inspection and services will follow the recommended intervals by the manufacture guidelines.
- Procedures to control driver fatigue that includes limits to worker hours and cross checking driver times through the GPS system.
- Procedures to prevent loads from shifting, including the use of specifically designed container twist locks. These locks are checked periodically throughout a delivery.
- Procedures to suspend operations for inclement weather or problems on the route.
- A *Drug and Alcohol Policy* that details the organisation’s awareness programme and notes the circumstances that testing may be carried out.

The auditor reviewed records confirming the above activities have been conducted.

Stellar does not subcontract any of its cyanide transport operations within the scope of this audit.
2.1.5 Transport Practice 1.5

Follow international standards for transportation of cyanide by sea and air.

☑ in full compliance with

Stellar is ☐ in substantial compliance with ☐ not in compliance with

Transport Practice 1.5

Summarise the basis for this Finding/Deficiencies Identified:

Standard of Practice 1.5 requiring the operation to follow international standards for transportation of cyanide by sea and air is NOT APPLICABLE to Stellar.

Stellar does not intend to transport consignments of cyanide by sea within the scope of this audit.

2.1.6 Transport Practice 1.6

Track cyanide shipments to prevent losses during transport.

☑ in full compliance with

Stellar is ☐ in substantial compliance with ☐ not in compliance with

Transport Practice 1.6

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is in FULL COMPLIANCE with Transport Practice 1.6 requiring the operation track cyanide shipments to prevent losses during transport.

Stellar’s vehicles have means to communicate with the Stellar Depot, the mining operation, the cyanide producer and emergency responders.

All drivers and equipped with mobile phone and Mobile phone charge capacity is to be provided in each vehicle. Additionally, vehicles are fitted with a two-way radio system.

All communications systems are to be checked prior to the convoy leaving as per the pre-departure checklist.

Emergency contact numbers are provided in the Procedure for Contact Details, which is carried in each vehicle. The procedure states that numbers are reviewed during each route assessment review.

No communication black out zones have been identified on routes to current end user destinations within Ghana and surrounding areas. However, the QHSE Manager stated that black spots are identified during the route survey.

Communication equipment is tested to ensure it functions properly either periodically or through continuous means. A GPS tracking system has been installed in all dedicated cyanide transport vehicles. This system is tested through continuous use.

Stellar has implemented systems and procedures to track the process of cyanide as described in the Chain of Custody – Cyanide procedure. Stellar utilises a GPS Mapping/Tracking system to determine vehicle locations. The system can detail the vehicle ID, local time, status (i.e. end drive, parked, drive), current location, course, speed.

The driver’s journey plan also details the departure and delivery points and rest points in between.
Safety Data Sheets are available during transport. The pre-departure vehicle checklist ensures they are in every vehicle.

Stellar has implemented inventory controls and/or chain of custody documentation to prevent loss of cyanide during shipment when it commences cyanide transportation activities. After the inspection, a waybill is created by Stellar for each container. The waybill (duplicate and original) accompanies the Driver during the delivery. The waybills include a description of the goods, including container details and weights. This system is used as proof of delivery to customer mines.

Stellar does not subcontract any of its cyanide transport operations within the scope of this audit.

### 2.2 Principle 2 - Interim Storage

Design, construct and operate cyanide trans-shipping depots and interim storage sites to prevent release and exposures.

**2.2.1 Transport Practice 2.1**

Store cyanide in a manner that minimises the potential for accidental releases.

☑ in full compliance with

☐ in substantial compliance with

☐ not in compliance with

**Stellar is**

**Transport Practice 2.1**

**Summarise the basis for this Finding/Deficiencies Identified:**

Transport Practice 2.1 requiring transporters design, construct and operate cyanide trans-shipping depots and interim storage sites to prevent release and exposures is NOT APPLICABLE to Stellar.

Within the scope of this audit, there are no trans-shipping depots or interim storage sites, as defined in the audit protocol. Storage in transit may occur at Stellar’s Takoradi Depot in the event that receipt at the port is delayed. In this event containers will not be removed from the trailers and the vehicles will only be parked for a maximum of 24 hours.

### 2.3 Principle 3 - Emergency Response

Protect communities and the environment through the development of emergency response strategies and capabilities.

**2.3.1 Transport Practice 3.1**

Prepare detailed Emergency Response Plans for potential cyanide releases.

☑ in full compliance with

☐ in substantial compliance with

☐ not in compliance with

**Stellar is**

**Transport Practice 3.1**

**Summarise the basis for this Finding/Deficiencies Identified:**

Stellar is in FULL COMPLIANCE with Transport Practice 3.1 requiring the operation prepare detailed Emergency Response Plans for potential cyanide releases.
Stellar has developed an *Emergency Plan for the Transportation of Sodium Cyanide* (EP). The EP is specific to the design of the vehicles and transportation routes used by Stellar. Section 8 details “Incident Types” and it includes scenarios for truck transportation. It considers both the physical and chemical form of cyanide along with the method of transport. The consideration of transport infrastructure has also been undertaken by Stellar through route risk assessments. Route risk assessments detail the condition of the road, traffic hazards, intersections and issues to be managed by the driver along the route.

The EP includes a description of the response actions for an anticipated emergency situation. Section 10 outlines clean up and decontamination and covers:

- Personnel
- PPE
- Contaminated Area and Equipment
- Dry Sodium Cyanide Spill
- Sodium Cyanide Spill to Water
- Fire Hazards and Response
- Environmental Monitoring.

The EP identifies the roles of outside responders and medical facilities in the event of an emergency. Section 11 provides roles for Driver, Convoy leader, ERT and External Responders.

Emergency contact numbers for internal and external entities are provided as appendices in EP.

### 2.3.2 Transport Practice 3.2

Designate appropriate response personnel and commit necessary resources for emergency response.

- in full compliance with
- in substantial compliance with
- not in compliance with

**Summarise the basis for this Finding/Deficiencies Identified:**

Stellar is in FULL COMPLIANCE with Transport Practice 3.2 requiring they designate appropriate response personnel and commit necessary resources for emergency response. Stellar provides emergency response training of appropriate personnel. Stellar has developed and implemented a training scheme for its Drivers and Convoy Supervisors. The minimum training requirements are:

- Specific site inductions
- Product awareness
- Emergency Response requirements
- First aid
- Convoy procedures.
Drivers are given additional training in the basics of reacting to a spill:

- Correct PPE to protect the individual
- Containment techniques
- Load recovery techniques
- Emergency numbers to call.

A review of the training records confirmed that all drivers had completed the required training.

Descriptions of the specific emergency response duties and responsibilities for internal personnel and external entities are included for:

- Driver
- Convoy leader
- ERT
- External Responders.

Stellar maintains a list of all of its emergency response equipment that should be available during the transport route. The quantity and condition of the equipment is checked as part of the Truck Emergency Response Equipment Checklist and Pre-Departure Vehicle Checklist.

Stellar provides emergency response training of appropriate personnel. The EP states that “Refresher training will be organised at a minimum on an annual bases and whenever the plan is reviewed or an incident occurs. Where there is change in the route used, refresher training on emergency response will be undertaken.”

Emergency response training is part of the minimum training requirements for cyanide drivers. The training matrix showed that all of the core cyanide drivers had completed the driving.

Interviews and inspections of the checklists by the Auditor indicate that the equipment inspections are occurring as stipulated.

Stellar does not subcontract any of its cyanide transport operations within the scope of this audit.

2.3.3 Transport Practice 3.3

Develop procedures for internal and external emergency notification and reporting.

Stellar is

☑ in full compliance with
☐ in substantial compliance with
☐ not in compliance with

Transport Practice 3.3

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is in FULL COMPLIANCE with Transport Practice 3.3 requiring that they develop procedures for internal and external emergency notification and reporting.
The EP contains procedures and current contact information for notifying outside response providers, and medical facilities of an emergency. The EP contains an emergency contact flow chart and emergency contact details for internal and external entities, including Stellar personnel, Emergency Response Team Members, Regulatory Authorities, Ghana National Fire Services, Ghana Police Service and Hospitals and Clinics.

Systems are in place to ensure that internal and external emergency notification and reporting procedures are kept current. The EP, including contacts, is reviewed at least annually and the contact details procedure is updated with every route review.

2.3.4 Transport Practice 3.4

Develop procedures for remediation of releases that recognise the additional hazards of cyanide treatment.

☑ in full compliance with
☐ in substantial compliance with
☐ not in compliance with

Transport Practice 3.4

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is FULL COMPLIANCE with Transport Practice 3.4 requiring that they develop procedures for remediation of releases that recognise the additional hazards of cyanide treatment.

Stellar has a procedure for remediation, such as recovery or neutralisation of solutions or solids, decontamination of soils or other contaminated media and management and/or disposal of spill clean-up debris. This is covered in the EP.

The EP includes a description of the response actions for an anticipated emergency situation, including clean up and decontamination and covers Dry Sodium Cyanide Spill and Sodium Cyanide Spill to Water.

Stellar prohibits the use of chemicals such as sodium hypochlorite, ferrous sulfate and hydrogen peroxide to treat cyanide that has been released into surface water.

Under the section of sodium cyanide spill to water the EP states:

*Stellar logistics limited prohibits the use of chemicals such as sodium hypochlorite, ferrous sulphate and hydrogen peroxide to treat cyanide that has been released into surface water.*

2.3.5 Transport Practice 3.5

Periodically evaluate response procedures and capabilities and revise them as needed.

☑ in full compliance with
☐ in substantial compliance with
☐ not in compliance with

Transport Practice 3.5

Summarise the basis for this Finding/Deficiencies Identified:

Stellar is FULL COMPLIANCE with Transport Practice 3.5 requiring the operation periodically evaluate response procedures and capabilities and revise them as needed.
There are provisions for periodically reviewing and evaluating the adequacy of the EP. Section 16 of the EP states that:

Stellar’s Safety Manager is the nominated person responsible for updating this plan when the following happens:

- Contact numbers change.
- After an incident and the resulting investigation and evaluation deems it necessary.
- Updated at least annually

Stellar has provisions for periodically conducting mock emergency drills.

One of the measures used to implement the EP is to:

…offer training to Stellar Logistics emergency response teams and engage them in periodic mock drills (with other stakeholders) which simulate cyanide or other dangerous goods spill events. Frequency of refresher training will be on an annual basis.

Evidence was provided in the form of drill reports that desktop and mock drill exercises are being undertaken by Stellar.

3.0 LIMITATIONS

Your attention is drawn to the document - “Limitations”, which is included as Appendix A to this report. This document is intended to assist you in ensuring that your expectations of this report are realistic, and that you understand the inherent limitations of a report of this nature. If you are uncertain as to whether this report is appropriate for any particular purpose please discuss this issue with us.

APPENDIX A
Limitations
LIMITATIONS

This Document has been provided by Golder Associates Pty Ltd ("Golder") subject to the following limitations:

This Document has been prepared for the particular purpose outlined in Golder's proposal and no responsibility is accepted for the use of this Document, in whole or in part, in other contexts or for any other purpose.

The scope and the period of Golder’s Services are as described in Golder’s proposal, and are subject to restrictions and limitations. Golder did not perform a complete assessment of all possible conditions or circumstances that may exist at the site referenced in the Document. If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Golder in regards to it.

Conditions may exist which were undetectable given the limited nature of the enquiry Golder was retained to undertake with respect to the site. Variations in conditions may occur between investigatory locations, and there may be special conditions pertaining to the site which have not been revealed by the investigation and which have not therefore been taken into account in the Document. Accordingly, additional studies and actions may be required.

In addition, it is recognised that the passage of time affects the information and assessment provided in this Document. Golder’s opinions are based upon information that existed at the time of the production of the Document. It is understood that the Services provided allowed Golder to form no more than an opinion of the actual conditions of the site at the time the site was visited and cannot be used to assess the effect of any subsequent changes in the quality of the site, or its surroundings, or any laws or regulations.

Any assessments made in this Document are based on the conditions indicated from published sources and the investigation described. No warranty is included, either express or implied, that the actual conditions will conform exactly to the assessments contained in this Document.

Where data supplied by the client or other external sources, including previous site investigation data, have been used, it has been assumed that the information is correct unless otherwise stated. No responsibility is accepted by Golder for incomplete or inaccurate data supplied by others.

Golder may have retained subconsultants affiliated with Golder to provide Services for the benefit of Golder. To the maximum extent allowed by law, the Client acknowledges and agrees it will not have any direct legal recourse to, and waives any claim, demand, or cause of action against, Golder's affiliated companies, and their employees, officers and directors.

This Document is provided for sole use by the Client and is confidential to it and its professional advisers. No responsibility whatsoever for the contents of this Document will be accepted to any person other than the Client. Any use which a third party makes of this Document, or any reliance on or decisions to be made based on it, is the responsibility of such third parties. Golder accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this Document.
At Golder Associates we strive to be the most respected global company providing consulting, design, and construction services in earth, environment, and related areas of energy. Employee owned since our formation in 1960, our focus, unique culture and operating environment offer opportunities and the freedom to excel, which attracts the leading specialists in our fields. Golder professionals take the time to build an understanding of client needs and of the specific environments in which they operate. We continue to expand our technical capabilities and have experienced steady growth with employees who operate from offices located throughout Africa, Asia, Australasia, Europe, North America, and South America.
